OVERVIEW

Creative technologist and computational social scientist with 10+ years of UX and design research experience. I build things at the intersection of AI, data, and human behavior. NLP pipelines, multi-agent simulations, research tools, and creative workflows. Recent work spans LLM evaluation, agentic systems, and community behavior analysis. Experience delivering insight-to-action systems for senior stakeholders in fast-moving, experimental settings. I'm drawn to environments where the brief is fuzzy and the build matters. Currently finishing an MA in Quantitative Methods at Columbia University.

TECHNICAL SKILLS

AI and Machine Learning: NLP pipelines, LLM prompt design and evaluation, sentence-transformers, spaCy, VADER, BERTopic, scikit-learn, NLTK, Ollama, Gemma4 (local LLMs)

Data and Engineering: Python (pandas, numpy, scipy), SQL, BigQuery, Google Places API, MediaCloud API, data pipelines, JSON and CSV processing

Visualization and Tooling: Streamlit, Plotly, Altair, Matplotlib, NetworkX, p5.js

Creative Technology: Generative AI, multi-agent simulation, semantic embeddings, creative workflow prototyping, agentic AI workflows (LangGraph, semantic embeddings, CrewAI - in progress)

Design: Figma, Adobe CS, Webflow, UI/UX, experience design, creative workflow prototyping

Research: Ethnographic, mixed-methods, DCE, Bayesian modeling, behavioral science, cultural insights

Languages: English (native), Mandarin (proficient), Indonesian (basic)

WORK EXPERIENCE

Research Assistant

IPCC Data Distribution Centre, Columbia University

2026 – Present

- Engineer data pipelines to extract, process, and visualize UN IPCC climate datasets for global research distribution.
- Redesign search, filtering, and AI-powered recommendation UX for Columbia's IPCC DDC portal to improve accessibility and discoverability (in-progress).

Lead Behavioral Researcher and Experience Designer

Kantar Public Singapore (public sector research consultancy)

2021 – 2023

- Led a mixed-methods behavioral research team for public sector clients across housing, heritage, arts, environment.
- Applied COM-B behavior change frameworks and mixed-methods research to understand why citizens comply with or resist public norms and services — across littering, home maintenance, arts and heritage engagement, and digital adoption.
- Ran Discrete Choice Experiments (DCE, n=1,000) to model environmental and social influences on littering behavior. Translated findings into intervention designs and proposed behavioral pilot tests for the Public Hygiene Council.
- Designed large-scale attitudinal research (n=9,000 across 9 international markets) using Bayesian modeling to segment arts perception patterns for NAC.
- Clients: Housing Development Board (HDB), National Heritage Board (NHB), National Arts Council (NAC), Infocomm Media Development Authority (IMDA), National Environment Agency (NEA)

Co-Founder

FabCafe Singapore at ArtScience Museum

2016 – 2020

- Co-founded and built a creative technology community at ArtScience Museum Singapore, part of Marina Bay Sands.
- Grew from launch to a self-sustaining program through workshops, residencies, product R&D, and partnerships with Autodesk, Apple, Twitter, Bayer, Uniqlo, Temasek.

Design Researcher

Frog Inc.

2015 – 2016

- User research and co-creation workshops to inform redesign of UBS APAC wealth advisory application.
- Contributed to securing Phase 2 product development funding through senior stakeholder presentations.

Co-Founder and Chief Creative Officer

Saturday Kids

2012 – 2016

- Built and scaled a STEM education platform to 2,500+ participants across B2B and B2C verticals.
- Developed partnerships with Google, UN Women, and IMDA.

PROJECTS

Reddit Community Network Analysis | Columbia University

2026

<https://github.com/halfbluebanana/reddit-community-network-analysis>

- Mapped bot vs. human interaction structure across three Reddit networks to test the Dead Internet Theory structurally.
- Found that humans show 42.8% reply reciprocity vs. 1.4% for IRA bots and 0% for GPT-2 bots. Bots broadcast, humans converse.
- Used live Reddit API data to build directed weighted networks of 48, 963, and 3,140 nodes in NetworkX, across r/changemyview (humans), r/SubSimulatorGPT2 (GPT-2 bots), and an IRA troll dataset.
- Identified a crypto-topic sub-cluster within the IRA operation via eigenvector centrality. Solo project.

Iran War Media Framing | Columbia University QMSS

2026

<https://media-framing-iran-2026.streamlit.app/>

- Group project. Role: data pipeline, LLM scoring framework, network analysis, D3.js visualization, app and research design.
- Filtered 53,000 articles to 1,925 across 77 sources using sentence-transformers; scored each across five framing dimensions (military, humanitarian, diplomatic, economic, culpability) using a locally-hosted LLM (Gemma4).
- Clustered outlets by aggregate framing profile using BERTopic; built a cosine-similarity network graph in NetworkX revealing structural relationships across the media landscape regardless of political affiliation.
- Published as an interactive multi-page Streamlit app with interactive charts and graphs in Plotly, Altair, and custom D3.js visualizations comparing US vs. non-US media framing over time.

Word Soup | B-Dome Berlin

2026

<https://www.youtube.com/watch?v=qhK-XegaaSA>

- Built the NLP engine for a 10 minute generative dome installation at B-Dome Berlin. Words drift, bond, and fuse based on their semantic relationships, rendered through a custom ASCII engine.

- Used spaCy and sentence-transformers (all-MiniLM-L6-v2) to extract ~800 words from Italo Calvino and Alan Watts, encoded as 384 dimension semantic vectors. Scored each across four semantic axes: mass, abstractness, volatility via vector projection; sociability via PMI-based co-occurrence.
- Axis scores drove word-agent behaviors (fusion, consumption, fade) in a multi-agent simulation. Role: NLP pipeline and semantic data engineering. Collaboration with Pim Tournaye (system design, ASCII rendering engine).

NYC Supermarket Secrets | Columbia University

2025

<https://nyc-supermarket-apps.streamlit.app/>

- Solo project. Studied linguistic asymmetries across 1,331 Google Maps reviews from 267 stores, 14 chains, and 3 NYC boroughs to understand how vocabulary, sentiment, and complaint patterns vary by chain, neighborhood, and socioeconomic context.
- Built a Python pipeline: Google Places API for collection; VADER for sentence-level sentiment; TF-IDF at store and chain level to surface distinctive vocabulary; keyword categorization for complaint and praise types (quality, service, price, checkout, availability); vocabulary complexity metrics (diversity, word length, sentence length) as socioeconomic proxies.
- Found that Whole Foods reviewers use the most distinctive and complex vocabulary; Astoria and Harlem have the highest complaint-to-praise ratios; Long Island City concentrates complaints in quality and service; Food Bazaar and Trader Joe's score highest on positive sentiment; 2.6% of reviews flagged as potentially fake.

EDUCATION

MA Quantitative Methods of Social Sciences, Columbia University	2025 – Present
MA Interactive Media Arts, New York University	2024 – 2025
Architecture and Systems Engineering, MITx Professional Certificate	2017 – 2018
BA Sociology (Honours), National University of Singapore	2007 – 2011

SPEAKING AND COMMUNITY

TEDx Manila – Speaker	2016
Singapore Design Week – Behavioral design for social good	2023
JSConf Asia – Conference designer	2016 – 2020
MIT Public Policy Hackathon – Mentor, winning team	2022
NYU ITP – Workshop on human errors and dark patterns	2023
Platform Tech Film Festival (ArtScience Museum) – Co-organizer	2019
